HERSUS Webinar

HERSUS strives to enhance and test innovative teaching practices in the field of sustainability of the built heritage, hence, to enrich the competence and motivation of educators and researchers to include curricula elements that will have tangible results, preparing students and educators to become real actors of the environmental change.

On **February 18th and 19th**, HERSUS Consortium would like to welcome you to the first Project event dedicated to the presentation of project activities and results of the first research phase, and especially to open up discussion on enhancing heritage awareness and sustainability of the built environment in architectural and urban design higher education among different topics of interest.

The first Multiplier event, HERSUS Intro Presentation, is planned in the sense of dialogue meeting, bringing together associate partners of HERSUS, as well as the wider professional and academic community. Within this activity, general information about the consortium members will be provided along with the presentation of the HERSUS research aims and intellectual outputs.

In the Seminar, **seven Keynoters** will give their lectures regarding the project scope within three main topics: Reconstruct, Reuse, and Resilience, while representatives from five consortium schools will present specific teaching methodologies. The main objective for organising “Seminar on Teaching through design for Sustainability of the Built Environment and Heritage Awareness” for academic staff, students, and professionals is reflected in need to (1) exchange different professional expertise, methodologies, and approaches between the partner organisations, and (2) discuss the direction of their development and implementation in the following project activities and existing study programs.
