

WHERE SEA MEETS LAND

a cooperation journey with TU Delft

This educational activity combines two existing courses: "An introduction to Maritime Spatial Planning" (Iuav) and "Adaptive Strategies. Designing scenarios for port cities" (TU Delft). The courses are running in parallel in the two universities with two common case studies: the Adriatic Sea and the Dutch North Sea. Iuav course mainly focuses on the sea from a planning and ecologist perspective. Delft, on the other hand, works on coastal landscapes with a focus on their interaction with the sea space. The event guarantees a valuable opportunity for students to combine different approaches and share the territorial specificities (and needs) from land to water and from water to land.
