

# MPS CHALLENGE

## Engaging through planning games

**17.05.2023**  
**Cotonificio**  
**aula G1**  
**9.30 am**

This event is organized in the framework of CASCADE project and it focuses on the simulation of planning and management strategy through the serious game MSP Challenge.

Step by step, the students come to understand how the maritime economy influences the marine environment and experience the strategic behaviour of decision-makers and stakeholders.

The game aims is to increase the awareness of **Maritime Spatial Planning** (MSP) among maritime stakeholders by providing a basic level understanding of the complex national and cross-border MSP process.
