

Here are the three questions you are required to answer when filming your video. Please respect the following requirement:

- Maximum length 3 minutes
- Maximum size 50mb

- 1. Why have you chosen Italy, Venice and this master of science for your graduate studies? Cities can represent the best places to set more sustainable plans to reduce impacts of climate change especially after the pandemic period. In this sense, in which way and with which solutions can urban planning contribute to design more resilient cities? Taking this into consideration, in your previous studies have you come across any urban project or relevant urban policy in a city that is familiar for you, that have been particularly interesting or inspiring to you and why?**
- 2. Do you think this degree course gives you the opportunity of developing a unique critical approach that can be applied to urban planning in a period of global transition? Please, give explanations for your answers.**
- 3. What relevance do you think should be given to natural resource management, climate change adaptation, risk reduction and post disaster perspectives in a Master of Science in Urban Planning for Transition? Do you have any specific expectations?**
