Leonardo Martines, artisan-artist specialising in complex interlacing techniques for fashion.
Carola Emanuela Godja, designer, researcher and founder of Emi BioLab

Bringing these practices together, the two designers' collaboration examines the interaction between alginate filaments and complex interlacing techniques. By observing how the material's properties influence technical decisions, they investigate material agency in the design process, asking how the encounter between matter and craft can generate new structural and aesthetic outcomes rather than reproduce those of conventional fibres.

Seminar organised by professor **Lucia Rosin** together with PhD student **Giulia Ciola** within Fashion Material Design Studio.

Track in Fashion Ecologies.
