

CLIMATE CHANGE AND CITIES

Urban microclimate and heat adaptation

16.10.2024
online
2 pm

In the context of the Interreg IPA-Adriion NATURED project, a series of transnational seminars is organized to share information, exchange knowledge, and build capacity on the complex interactions between climate (change) and cities, in particular on how the structure and composition of the urban environment profoundly influences the local microclimate. The first transnational seminar especially focuses on the variables influencing the overheating of cities (i.e., urban heat island phenomenon) and the possible responses to adapt them to increasing heat stress.

invited speakers:

Domagoj Vidaković Energo-data

Emanuele Naboni Professor of Sustainable Design,
Royal Danish Academy and Norman Foster Institute

Marco Noro Associate Professor, University of Padua
